

Vaddio REACH Declaration

Vaddio, LLC
9433 Science Center Drive
New Hope, MN 55428
USA

February 9, 2010

Per REACH (Registration, Evaluation, Authorization and Restriction of Chemicals) EU Chemicals Legislation, producers or importers of articles may or may not have to register these articles. An Article is defined as an object whose shape, surface and design are more relevant than the chemical composition of the object. All of Vaddio's products (cameras, camera control systems, video switchers, monitors, mounts and adapters) are Articles, and as such fall under the scope pertaining to said articles in the requirements for possible chemical registration. For additional information see http://echa.europa.eu/reach_en.asp.

Since the Articles are neither "intended to release substances above 1 ton/article", or contain any of the SVHD substances (Substances of Very High Concern) >0.1% weight/weight, it is Vaddio's position that no registration or further action is required.

Vaddio will continue to monitor the legislation and updated SVHC list, and will update our position as required to meet the current regulations.
